Date :
P.No. :

(1) $P(F) = 0.3$ → nurse forget the pill
$P(G) = 0.7$ → nurse gave the pill
$P(D|G) = 0.2$ → death if pill given
$P(D|F) = 0.8$ → death if pill not given

$$P(F|D) = \frac{P(D|F)\,P(F)}{P(D)}$$

$$P(D) = P(D|F)\,P(F) + P(D|G)\,P(G)$$
$$\Rightarrow (0.8 \times 0.3) + (0.2 \times 0.7)$$
$$\Rightarrow 0.24 + 0.07$$
$$P(D) \Rightarrow 0.31$$

$$P(F|D) = \frac{0.8 \times 0.3}{0.31} = \frac{0.24}{0.31} \approx 0.774 \text{ Ans}$$
$$\Rightarrow 77.4\%$$

(2) [illegible] → [illegible] Percent
